

Dr Ed Powley

Introduction

In this assignment, you are required to complete a number of tasks to accompany your studies of the principles of computing. This assignment is divided into a series of bite-sized **worksheets** and **exercise sheets**. The worksheets require you to **design**, **annotate**, and **write** a series of computer programs according to instructions. The exercise sheets require you to **apply** mathematical techniques to **solve** problems.

"Bad programming is easy. (People) can learn it in 21 days, even if they are dummies...(Good programming requires a) willingness to devote a large portion of one's life to deliberative practice...So go ahead, buy that book; you'll probably get some use out of it. But you won't change your life or your real expertise as a programmer in 21 days...How about working hard to continually improve over 24 months? Well, now you're starting to get somewhere..."

— Peter Norvig

In order for programmers to communicate with each other regarding the technical aspects of a game development project, they must have good computational thinking skills, a strong foundational knowledge of computing principles, applied knowledge of program design notations and annotations, and a working knowledge of particular programming constructs (often as a result of writing their own versions). Such knowledge and skills take time and a sustained effort to develop. For this reason, you will work consistently across the semester by completing a series of bite-sized worksheets.

This assignment is formed of **ten** parts: Worksheets A, B, C, D and E; Exercise Sheets i, ii, iii, iv and v. These address the following five learning objectives:

- A **Apply** basic computational thinking to puzzle solving;
- B **Express** simple algorithms using notations such as flowcharts and pseudocode;
- C **Utilise** theoretical concepts such as computational complexity;
- D **Implement** programs making use of advanced data structures;
- E **Understand** how computer processors execute low-level machine code
 - i **Use** number representation systems including binary and hexadecimal;
 - ii **Reason** using the operations of Boolean logic;
 - iii **Apply** the principles of set theory;
 - iv **Understand** recursive algorithms and their relation to mathematical induction;
 - v **Calculate** geometric quantities using vectors.

For each part you must:

- (i) **Read** the instructions in the worksheet or exercise sheet;
- (ii) **Complete** all of the problems presented;
- (iii) **Submit** your solution according to the instructions on the worksheet or exercise sheet, and by the deadline specified on the worksheet or exercise sheet.

Assignment Setup

This assignment consists of **ten formative submissions**, followed by a **single summative submission**. You will receive **feedback** after each formative submission.

Each worksheet and exercise sheet contains detailed submission instructions. For worksheets you will generally be required to **fork** a repository on GitHub

SpaceChem is a puzzle game in which players must apply computational thinking to build circuits which assemble chemical molecules.

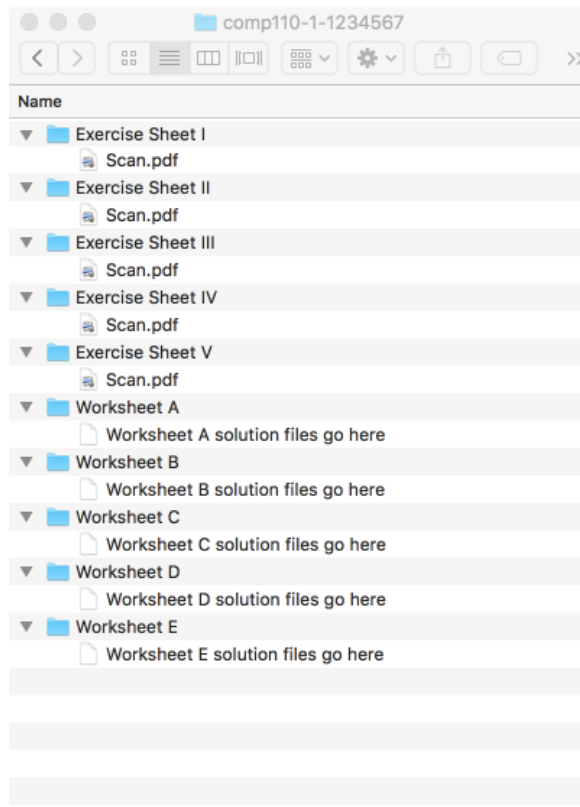

Figure 1: Recommended folder structure for your final summative submission.

and submit a **pull request** containing your solution. For exercise sheets you will generally be required to complete a set of mathematical problems using pen-and-paper, and hand this in physically in class.

At the end of the semester you will be required make a final summative submission of all five of your worksheet solutions **and** all five of your exercise sheet solutions. Prepare a **single .zip file** containing your ten submissions **in ten separate folders**, and upload it to the appropriate submission area on LearningSpace. The folder structure within your zip file should resemble that shown in Figure 1. This submission is for archival purposes only; at this stage your work has already been marked and you have received feedback, and you should **not** submit any new, unmarked work via LearningSpace unless you have been granted permission to do so by the tutor.

This final submission is subject to the usual university policies regarding late submission or non-submission, as detailed in the course handbook — even if you have met all the formative deadlines for individual worksheets and exercise sheets, failure to make a submission via LearningSpace by the summative deadline will be subject to penalties.

Additional Guidance

Make a submission on time and you will get a basic pass on that worksheet, even if your solution is incorrect or incomplete. A solution meeting all of the correctness and/or functionality criteria on the worksheet is required to demonstrate basic proficiency, with higher grades contingent on your solution being of a high quality. The individual worksheets give more guidance as to what constitutes “quality” for that particular exercise, but bear in mind that a major purpose of these worksheets is to assess your ability to communicate complex computational ideas in English, in notation and in program code. Thus pay particular attention to the precision and clarity of your written communication, and the readability and maintainability of your source code.

It is very important to keep up with the worksheets. Missing a deadline results in an automatic mark of 0% for that worksheet. The underlying skills being developed are also critically important to your progression as a programmer, so do not neglect the work. Do not underestimate the time it takes to complete tasks that may appear trivial when you first see them. Do not leave work until the last minute! With programming in particular, trying to “cram” the work just before the deadline is a sure path to failure. Aim for consistent, steady progress over the course of the semester.

A key skill of software development is the ability to read and follow instructions. Make sure to read the worksheet carefully to ensure that you are meeting all of the requirements — a surprising number of students needlessly lose marks by misreading the worksheet.

Nobody learns in a vacuum: you are allowed, and indeed encouraged, to discuss your work with your peers. However you must be very careful to avoid falling into **academic misconduct**, in particular **plagiarism**. If any part of your solution is **not your own individual work**, you must make this as clear as possible in your submission, for example in source code comments.

FAQ

- **What is the deadline for this assignment?**

Each worksheet has its own formative deadline, specified on that worksheet and also communicated in class. Falmouth University policy states that summative deadlines must only be specified on the MyFalmouth system.

- **What should I do to seek help?**

You can email your tutor for informal clarifications. For informal feedback, make a pull request on GitHub.

- **How will I receive feedback on my work?**

You will be given verbal feedback on your work during the session in which it is marked. If you require more in-depth feedback or discussion, please book an appointment with your tutor.

- **Is this a mistake?**

If you have discovered an issue with the brief itself, the source files are available at:

<https://github.com/Falmouth-Games-Academy/bsc-assignment-briefs>.

Please make a pull request and comment accordingly.

Marking Rubric

Criterion	Weight	Refer for Resubmission	Basic Competency	Basic Proficiency	Novice Competency	Novice Proficiency	Professional Competency
Basic competency threshold	40%	A reasonable attempt at one or more worksheets was not submitted by the corresponding formative deadlines. At least one of the online quizzes was not passed.	A reasonable attempt at each worksheet was submitted by the corresponding formative deadlines. Each of the online quizzes was passed, with either a score of 80% by the quiz’s formative deadline or a score of 100% after the deadline. There is no evidence of academic misconduct.				
Worksheet A	12%	Please see worksheet for marking criteria.					
Worksheet B	12%	Please see worksheet for marking criteria.					
Worksheet C	12%	Please see worksheet for marking criteria.					
Worksheet D	12%	Please see worksheet for marking criteria.					
Worksheet E	12%	Please see worksheet for marking criteria.
