

# COMP140 WORKSHEET B: FRACTALS

Version 1.0  
BSc Computing for Games  
COMPXXX

Brian McDonald & Ed Powley

In this worksheet, you will carry out **Three Tasks**

This assignment is formed of several parts:

- (A) **Write**, a proposal for a game that uses an alternative controller which contains:
  - i. **describe** the game
  - ii. **describe** the core game mechanics
- (B) **Write** a proposal for an alternative controller which contains:
  - i. **research** into existing alt-Controllers
  - ii. **description** of the physical controller
  - iii. **design** of physical controller
- (C) Write a program to generate and display a fractal

## Part A

Part A consists of a **single formative submission**. This work will be assessed on a **threshold** basis.

The following criteria are used to determine a pass or fail:

- (a) Submission is timely;
- (b) Choice of game is feasible;
- (c) Design is distinctive and has creative merit.

To complete part A, fork the GitHub repository at:

<https://github.com/Falmouth-Games-Academy/comp140-worksheetB>

Use the existing directory structure and, as required, extend this structure with sub-directories. Ensure that you maintain the `readme.md` file.

Write your proposal in the `readme.md` document. This should use the **markdown** syntax, for additional guidance, please read the following

<https://github.com/adam-p/markdown-here/wiki/Markdown-Cheatsheet>

Please make a pull request before **Friday 9th of February at 5pm**, you will receive immediate feedback from your tutor.

## Part B

Part B is formed of **single formative submissions**. This will be assessed on a **threshold** basis. The following criteria are used to determine a pass or fail:

- (a) Submission is timely;
- (b) Research activities are exhaustive and well referenced
- (c) Description of the controller
- (d) Design is distinctive and has creative merit.

To complete Part B, write your proposal in the `readme.md` document using markdown syntax.

Please make a pull request before **Friday 16th of February at 5pm**, you will receive immediate feedback from your tutor.

## Part C

You will use the SDL2 library (<https://www.libsdl.org/index.php>) to write a program to generate and display a fractal; see Figure 1. This fractal colours each pixel of the image according to an iterated mathematical formula, as described below. The GitHub repository contains a project named `Fractal` for you to build upon. This contains code to create and display a random image; you will implement the calculations to generate the fractal.

Figure 1: An example of a fractal

### 1

To generate an interesting fractal, the on-screen  $x$  and  $y$  coordinates must first be rescaled. In the skeleton project the pixel coordinates range from 0 to 800, whereas the fractal is most interesting in the region  $-2 \leq x \leq 1$  and  $-1.5 \leq y \leq 1.5$ .

Let  $p_x$  be the  $x$  coordinate of the pixel. This can be remapped into the range  $x_{\min}$  to  $x_{\max}$  using the following formula:

$$x_0 = \frac{p_x}{\text{image.width}} \times (x_{\max} - x_{\min}) + x_{\min}$$

The  $y$  coordinate can be remapped using a similar formula.

**Implement** the above calculations for the  $x$  and  $y$  coordinates, at the indicated parts of `Fractal.cpp`.

## 2

The fractal set is based on the following sequence of numbers. Let  $x_0$  and  $y_0$  be the coordinates of a point in the image. Then the sequence  $x_1, y_1, x_2, y_2, x_3, y_3, \dots$  is defined<sup>1</sup> recursively for  $i = 0, 1, 2, 3, \dots$  by:

$$\begin{aligned}x_{i+1} &= (x_i)^2 - (y_i)^2 + x_0 \\y_{i+1} &= (2 \times x_i \times y_i) + y_0\end{aligned}$$

The points are coloured according to the *smallest* value of  $i$  for which  $(x_i)^2 + (y_i)^2 \geq 4$ . If such a value of  $i$  is not found after a large number of iterations (for example  $i = 200$ ), the pixel is coloured black.

**Implement** an algorithm which performs the above computation, determining the smallest value of  $i$  for which  $(x_i)^2 + (y_i)^2 \geq 4$  and selecting the appropriate pixel colour.

Implement the algorithm in `fractal.cpp` so that the program generates the fractal (Figure 1) when it is run.

## Submission instructions

You should complete a pull request before the hand-in on **Friday 16th of February at 5pm**, you will receive immediate feedback from your tutor.

## Marking criteria

Remember that **it is better to submit incomplete work than to submit nothing at all**.

To demonstrate **basic competency**, complete the following:

- **Timely Submission:** Obtain the marks for timely submission, you must submit (as a GitHub pull request). As with other worksheets, you may resubmit after these deadlines in order to collect extra correctness or quality marks. This is awarded as long as you submit *something* for each part by the deadline, even if your submission has bugs or other issues.
- Some evidence of emerging innovation and/or creativity in the design of the controller and game.

To demonstrate **basic proficiency**, complete the following:

- **Achieve basic competency**
- **Complete** Algorithm 1. **Note:** You will not be penalised for trivial errors which do not affect the overall functioning of your programs
- Appropriate use of GitHub, with descriptive commit messages
- Comments are used where appropriate, and are well written.
- Little evidence of emerging innovation and/or creativity in the design of the controller and game.

To demonstrate **novice competency**, complete the following:

---

<sup>1</sup>If you are familiar with complex numbers, you may notice that this is equivalent to  $z_{j+1} = z_j^2 + z_0$ , where  $z_j = x_j + y_j i$ .

- Achieve **basic proficiency**
- **Complete** Algorithm 2. **Note:** You will not be penalised for trivial errors which do not affect the overall functioning of your programs
- Your code is well formatted. Variable and function names are clear and descriptive.
- Much evidence of emerging innovation and/or creativity in the design of the controller and game.

To demonstrate **novice proficiency**, complete the following:

- Achieve **novice competency**
- **Research** a different fractal
- Considerable evidence of mastery of innovative and creative practice in the design of the controller and game.

To demonstrate **professional competency**, complete the following:

- Achieve **novice proficiency**
- **Implement** a new fractal and allow the user to choose what fractal to generate
- Significant evidence of mastery of innovative and creative practice in the design of the controller and game.
