

Dr Ed Powley

Introduction

"No matter the language, learning to program will take a very long time, and is often very frustrating. I'm sorry. There is no solution. Just practice. Regular practice.

"That's why I always call programming a craft. You spend your life honing your craft, not a weekend.

"You WILL get stuck. You WILL get very frustrated. You WILL want to quit. You WILL think this is all pointless and dumb. You WILL look at the things others are doing and think 'How the hell am I going to do this?'

"Programming can make you feel empowered. Programming can make you feel excited. Programming can be a major source of inspiration.

"But it has to come from you. YOU are the driving force here. I and others can only point you in a direction."

— Ólafur Waage

In this assignment, you are required to complete a number of programming tasks to accompany your studies of mathematics for 3D worlds and simulations. This assignment is divided into a series of **worksheets**, each of which requires you to **implement** mathematical methods and algorithms to solve specified problems.

In order for programmers to communicate with each other regarding the technical aspects of a game development project, they must have good computational thinking skills, a strong foundational knowledge of computing principles, applied knowledge of program design notations and annotations, and a working knowledge of particular programming constructs (often as a result of writing their own versions). Such knowledge and skills take time and a sustained effort to develop. For this reason, you will work consistently across the semester by completing a series of bite-sized worksheets.

This assignment is formed of **four** parts: Worksheets A, B, C, and D. These focus on the following four topics:

- A Parametric equations and 2D geometry;
- B Newtonian mechanics and numerical control;
- C 3D geometry and raycasting;
- D Efficiency and optimisation.

For each part you must:

- (i) **Read** the instructions in the worksheet or exercise sheet;
- (ii) **Fork** a GitHub repository containing a skeleton implementation;
- (iii) **Complete** the implementation as specified in the worksheet;
- (iv) **Submit** your solution via GitHub pull request, according to the instructions on the worksheet, by the deadline specified on the worksheet.

Assignment Setup

This assignment consists of **four formative submissions**, followed by a **single summative submission**. You will receive **feedback** after each formative submission.

Each worksheet contains detailed submission instructions. You will generally be required to **fork** a repository on GitHub and submit a **pull request** containing your solution.

At the end of the study block you will be required make a final summative submission of all four of your worksheet solutions. Prepare a **single .zip file** containing your four submissions **in four separate folders**, and upload it to the appropriate submission area on LearningSpace. This submission is for archival purposes only; at this stage your work has already been marked and you have received feedback, and you should **not** submit any new, unmarked work via

LearningSpace unless you have been granted permission to do so by the tutor.

This final submission is subject to the usual university policies regarding late submission or non-submission, as detailed in the course handbook — even if you have met all the formative deadlines for individual worksheets, failure to make a submission via LearningSpace by the summative deadline will be subject to penalties.

Additional Guidance

Make a submission on time and you will get a mark of at least 30% on that worksheet, even if your solution is incorrect or incomplete. A solution meeting all of the correctness and/or functionality criteria on the worksheet is required to demonstrate basic proficiency, with higher grades contingent on your solution being of a high quality. The individual worksheets give more guidance as to what constitutes “quality” for that particular exercise.

It is very important to keep up with the worksheets. Missing a deadline results in an automatic mark of 0% for that worksheet. The underlying skills being developed are also critically important to your progression as a programmer, so do not neglect the work. Do not underestimate the time it takes to complete tasks that may appear trivial when you first see them. Do not leave work until the last minute! With programming in particular, trying to “cram” the work just before the deadline is a sure path to failure. Aim for consistent, steady progress over the course of the semester.

A key skill of software development is the ability to read and follow instructions. Make sure to read the worksheet carefully to ensure that you are meeting all of the requirements — a surprising number of students needlessly lose marks by misreading the worksheet.

Nobody learns in a vacuum: you are allowed, and indeed encouraged, to discuss your work with your peers. However you must be very careful to avoid falling into **academic misconduct**, in particular **plagiarism**. If any part of your solution is **not your own individual work**, you must make this as clear as possible in your submission, for example in source code comments.

FAQ

- **What is the deadline for this assignment?**

Each worksheet has its own formative deadline, specified on that worksheet and also communicated in class. Falmouth University policy states that summative deadlines must only be specified on the MyFalmouth system.

- **What should I do to seek help?**

You can email your tutor for informal clarifications. For informal feedback, make a pull request on GitHub.

- **How will I receive feedback on my work?**

You will be given verbal feedback on your work during the session in which it is marked. If you require more in-depth feedback or discussion, please book an appointment with your tutor.

- **Is this a mistake?**

If you have discovered an issue with the brief itself, the source files are available at:

<https://github.com/Falmouth-Games-Academy/bsc-assignment-briefs>.

Please make a pull request and comment accordingly.

Marking Rubric

Criterion	Weight	Refer for Resubmission	Adequate	Competent	Very Good	Excellent	Outstanding
Worksheet A	25%	A reasonable attempt at the worksheet was not submitted by the formative deadline.	A reasonable attempt at the worksheet or exercise sheet was submitted by the formative deadline. There is no evidence of academic misconduct. See worksheet for detailed marking criteria.				
Worksheet B	25%	A reasonable attempt at the worksheet was not submitted by the formative deadline.	A reasonable attempt at the worksheet or exercise sheet was submitted by the formative deadline. There is no evidence of academic misconduct. See worksheet for detailed marking criteria.				
Worksheet C	25%	A reasonable attempt at the worksheet was not submitted by the formative deadline.	A reasonable attempt at the worksheet or exercise sheet was submitted by the formative deadline. There is no evidence of academic misconduct. See worksheet for detailed marking criteria.				
Worksheet D	25%	A reasonable attempt at the worksheet was not submitted by the formative deadline.	A reasonable attempt at the worksheet or exercise sheet was submitted by the formative deadline. There is no evidence of academic misconduct. See worksheet for detailed marking criteria.
